FOR ADHESION TROUBLE -> **LP COATING**

High and long lasting effect of the anti-adhesion with smooth surface.

ANTI-GLUE needles have a very good embroidery property. They are particularly suitable for materials, which are fixed with adhesive sprays, e.g. fleece or Velcro.

ANTI-GLUE needles significantly reduce the appearance of glue remainders in the groove and the eye of the needle. The life time of **ANTI-GLUE** needles is remarkably longer in comparison to ordinary embroidery needles.

When using **ANTI-GLUE** needles thread breaking due to glued needles is minimized.

TROUBLE BY REMAINDERS OF
ADHESIVE SPRAYS IN GROOVE AND EYE -> **LP COATING**

Glue and interlining of the material tend to stick on the needle eye and groove. It makes the loop formation unstable due to the unsmooth moving of the upper thread.

The main troubles are upper thread breakage and skipped stitches. ORGAN LP coating is effective for overcoming various kinds of troubles, caused by adhesion.
